**Subject:** Consultation engagement process for new County Development Plan  
**Date:** Wednesday 15 July 2020 00:20:38

---

Good day,

What's the process for engagement - by email - send on ideas for city development?

Would like to see the following.

1. Turn all major roads within the city into one way systems - think of inner orbital roads.
2. With the implementation of 1 above, leave cars with existing 1 lane whilst bringing in cycle and bus lanes to utilize the freed up lanes.
3. With 2 & 3 in place traffic light systems would be more effective - leading to quicker turn around times with less cross junctions.
4. Consider introducing wave breakers in salthill and docks area, could utilize the space for dockage - extra berthing locations - thus generating revenue for the council.
5. Four foot wall along the prom as a sea defence, far side of wall concaved to divert small waves back to the sea, point 4 above would break up the larger waves.
6. Resurface entire prom, one of the biggest draws to the city but yet it looks worse than a third world footpath. Outdoor tiles such as Málaga. Patterns - walk way systems to encourage distancing. This point would integrate with points 1 & 2 above.
7. Tuam road intersection to include fly overs and traffic lane merging.
8. Pump sand from 200meters off shore onto the beaches - thus raising sand areas for proper beach fronts. Would help with flooding and work in tandem with point 4 above.
9. Commit to prom extension to silver strand. Taking in point 6 redesign.
10. Pedestrianise cross street lower up past and including lombard street. Also pedestrianise Middle street and woodquay street. Also Dominic street + upper. Would pave the way for outside eating and drinking, social distancing whilst giving business more foothold - thus more commercial rates to council.

Regards  
Conor
